Middle Age C'tis: Miasma

C'tis one-page command brief

Middle Age C'tis combines cheap lizard infantry, slave troops, sacred capital guards, large Sobek warriors, strong priests, Nature and Death magic, and a dominion that changes the land around it. Its two capital sites produce five gems each month and unlock separate sacred, Sobek, poison, and commander lines. The Marshmaster supplies the nation's main repeatable magical depth, while the Lizard Shaman, Empoisoner, and priest hierarchy cover narrower jobs.

The basic plan is:

- use ordinary infantry and slaves for replaceable line work instead of spending every capital resource on elite troops;
- reserve capital recruitment for Poison Slingers, Swamp Guards, Sobek bodies, and Empoisoners when their specific jobs matter;
- record every Marshmaster's final paths before assigning research, searching, forging, summoning, or battle duty;
- use mundane commanders for ordinary leadership so expensive mage and priest turns remain available;
- treat Miasma as a strategic environment with documented qualitative effects, not as a licence to invent percentages or disease timing;
- connect Conjuration research to the actual caster and gem treasury, especially for Sacred Crocodile, Monster Toads, Couatl, and the externally gated Scorpion Man;
- protect additional forts and laboratories so the nation can replace researchers, priests, and field mages outside the capital.

C'tis converts heat, swamps, dominion, gold, recruitment, gems, and mage-turns into a war plan. Its main risks are slow troops, cold-blooded fatigue, dependence on a small mage portfolio, and the temptation to treat Miasma or poison resistance as a complete answer to an enemy army.

C'tis evidence and ruleset

This chapter covers unmodded Middle Age C'tis on the Book I 6.36 live baseline. The revision-2 official manual controls the player-facing roster, costs, recruitment limits, printed paths, Miasma description, and national ritual table. Nation ID 75, random masks, capital sites, spell restrictions, the Jade Mask restriction, and hero assignments are cross-checked against the pinned 6.35 Inspector export at `commit cfac4311bc0b58053b8dead7bffb036ba9bd5dc`.

The sources do not prove exact Miasma income percentages, disease-check timing, terrain-conversion probability, hosting order, cold-blooded fatigue outcomes, summon behaviour, assassin results, hero timing, or battle performance. Those remain unresolved. No runtime test, replay, save, or new test asset was used for this dossier.

C'tis conversion chain

```
heat preference, ordinary troops, capital specialists, Miasma, and five capital gems
-> provinces, protected forts, temples, laboratories, and dominion coverage
-> labelled Marshmasters, Shamans, Empoisoners, and priest turns
-> research, searching, Conjuration, forging, and battlefield support
-> surviving armies, replacement capacity, sieges, claims, and hostile economic pressure
```

The fragile arrows are cold, movement, capital congestion, mage-turn competition, and incomplete knowledge of Miasma's exact live calculations. A special dominion shapes the board, but it does not replace scouting, troop matching, logistics, or a reserve.

C'tis national rules that shape planning

Rule or asset	Source-backed fact	Planning consequence
Heat preference	The race summary prefers Heat +2; Pretender design has a Heat limit of +1.	Cold provinces create a documented fatigue concern for cold-blooded troops, but exact battle loss is not assumed.
Thick hides	The manual describes the lizard races as naturally protected.	Low-resource troops are not unarmoured humans, yet their full durability still depends on the attack faced.
Poison resistance	Ordinary C'tissians carry partial poison resistance; several capital records carry more.	Poison is part of the roster's identity, not universal immunity.
Miasma	Dominion changes non-sea land, harms outsiders, and favours C'tis economically.	Dominion placement matters strategically, but exact modifiers and timing remain unresolved.
Underwater exception	Underwater provinces are not affected by Miasma's special effects.	Water borders and disciples must not be analysed as though the land rule applied unchanged.
Two capital sites	The Temple Marsh and Empoisoners Guild divide capital recruitment and produce W1 D2 N2 gems in total.	Capital queues and five monthly gems must be tracked separately.
Strong priests	Recruitable H1, H2, and H3 priests are verified.	Temple work and sacred leadership are available without pretending every priest is also a researcher.

Miasma evidence boundary

The manual states that C'tis dominion brings heavy rain, turns non-sea land into swamps or drip caves, slightly increases income in provinces owned by C'tis, and severely reduces income in enemy provinces. Warm-blooded beings without Swamp Survival are subject to disease. The Pretender and sacred units are described as immune; disciples otherwise suffer the enemy treatment. Underwater provinces are excluded.

Those statements establish direction, eligibility, and broad strategic pressure. They do not establish the numeric income modifiers, how frequently disease is checked, whether all changes occur in the same hosting step, the probability or rate of terrain conversion, or every interaction with ownership changes and allied armies. This dossier uses Miasma to frame decisions while keeping those calculations open.

C'tis capital sites and gem economy

Site	ID	Verified fields
The Temple Marsh	62	W1 D2 N2; Swamp Guard, Sobek Warrior, Sobek Sacred Guard, and Sobek General recruitment records
Empoisoners Guild	12	Empoisoner and Poison Slinger recruitment records

The sites supply one Water, two Death, and two Nature gems each month. This directly funds several national Conjuration branches, but not Contact Scorpion Man's Earth cost. Site membership establishes legal capital recruitment, not the order in which those units should consume the queue.

Complete C'tis commander membership

Commander	Gold	Resources	Rec points	Verified recruitment
Taskmaster	40	2	1	Forts
Commander of C'tis	55	15	1	Forts
Lizard Lord	95	21	1	Forts
Hierodule	40	1	1	Forts
High Priest of C'tis	115	1	2	Forts
Lizard King	340	5	4	Forts
Lizard Shaman	125	2	2	Forts
Marshmaster	330	1	2	Forts
Sobek General	200	31	1	Capital only
Empoisoner	125	6	2	Capital only

Ten commander records reconcile. The ordinary forts can recruit the complete priest ladder and both non-capital mage families. The capital adds the Sobek General and Empoisoner, so using that queue for specialist commanders has an opportunity cost even before troops are considered.

C'tis commander jobs

Commander	Source-backed role	Important limit
Taskmaster	Cheap leader with Taskmaster +2	Slave morale interaction and final rout outcomes remain battle questions.
Commander of C'tis	Leadership 75 conventional commander	Resource cost competes with protected troops.
Lizard Lord	Leadership 100 protected commander	More expensive than the ordinary commander and has no magic.
Hierodule	Cheap H1 priest	Low leadership and no research path limit broader use.
High Priest of C'tis	H2 priest and modest leader	Two recruitment points and 115 gold compete with mages.
Lizard King	H3 priest with leadership 150	Four recruitment points and 340 gold make routine command expensive.
Lizard Shaman	S1 N1 sacred mage-priest	Narrow fixed paths and two recruitment points constrain volume.
Marshmaster	W1 D2 N2 random mage with undead leadership	Every turn spent outside research or magic carries a large opportunity cost.
Sobek General	Sacred, protected capital commander with Taskmaster	Capital-only and resource-heavy.
Empoisoner	Stealthy D1 N1 assassin with poison weapons	Assassination, patience, poison, and survival outcomes remain unresolved.

Complete C'tis troop membership

Troop	Gold	Resources	Rec points	Verified recruitment
Militia	7	2	5	Forts
C'tissian Heavy Infantry	10	15	11	Forts
City Guard	10	10	11	Forts
C'tissian Light Infantry	10	5	11	Forts
Runner	12	2	7	Forts
Slave Warrior	13	3	8	Forts
Falchioneer	13	17	18	Forts
Elite Warrior	15	9	9	Forts
Poison Slinger	24	6	32	Capital only
Sobek Warrior	30	34	13	Capital only
Swamp Guard	19	21	22	Capital only, sacred
Sobek Sacred Guard	55	37	33	Capital only, sacred, maximum two per month

Twelve troop records reconcile. The capital-only group contains four distinct jobs rather than one obvious default: poison missiles, a large protected Sobek body, a smaller sacred guard, and a very expensive limited Sobek sacred.

C'tis troop jobs

Troop	Source-backed role	Important limit
Militia	Very cheap spear body	Low Morale and combat skill restrict independent use.
Heavy Infantry	Protected spear line	Resources and cold-blooded encumbrance can limit sustained fighting.
City Guard	Middle protected spear line	Does not carry the Heavy Infantry's full armour.
Light Infantry	Mobile spear-and-javelin profile	Lower protection exposes it to missiles and contact.
Runner	Fast spear-and-bite body	Low protection and Morale make speed alone insufficient.
Slave Warrior	Trident-and-bite slave profile	Needs suitable leadership and should not be treated as ordinary morale.
Falchioneer	Ambidextrous two-falchion attacker	Recruitment and resource demand are high for a non-sacred body.
Elite Warrior	Better-skilled trident infantry	Moderate protection still leaves matchup dependence.
Poison Slinger	Capital poison missile specialist	High recruitment-point cost and live poison results need target evidence.
Sobek Warrior	Large, heavily protected capital fighter	Thirty-four resources and capital dependence constrain replacement.
Swamp Guard	Sacred protected falchion line	Capital-only and recruitment-point heavy.
Sobek Sacred Guard	Large sacred halberd body	Fifty-five gold, thirty-seven resources, thirty-three points, and a two-per-month limit prevent mass assumptions.

C'tis capital queue doctrine

The capital supplies four troop specialists and two commander specialists. Poison Slingers compete with sacred and Sobek production through recruitment points. Sobek Warriors and both sacred guards also consume substantial resources. Empoisoners consume mage-capable commander turns, while Sobek Generals occupy the same capital commander system.

A useful capital plan therefore begins with the job required: poison delivery, sacred staying power, large protected bodies, specialist assassination, or capital leadership. The answer changes with resources, bless value, enemy composition, and the number of non-capital forts already producing Marshmasters and Shamans.

Reading the Marshmaster random paths

Every Marshmaster begins W1 D2 N2. The pinned record adds one guaranteed level from Water, Astral, Death, or Nature, then an independent ten-percent second level from the same four-path pool.

Final addition	Probability
No named path among either roll	73.125% for any one chosen W/S/D/N path
Exactly one level in a chosen path	26.25%
Two levels in the same chosen path	0.625%
Any second random level occurs	10%
Second roll repeats the first path	2.5% overall
Second roll adds a different path	7.5% overall

A chosen path appears at least once with probability 26.875%. Several recruits can still miss it, and the 330-gold cost means probability should be used for portfolio planning rather than an assumed delivery turn.

Marshmaster final-path portfolio

Primary result	Ordinary final paths before the second roll	Primary probability
Water	W2 D2 N2	25%
Astral	W1 S1 D2 N2	25%
Death	W1 D3 N2	25%
Nature	W1 D2 N3	25%

The second roll can deepen the same path or add one of the other three. Rare W3, S2, D4, or N4 outcomes exist at 0.625% for each named path. They are possible assets, not infrastructure that a plan may assume before recruitment.

C'tis native path boundary

Path	Repeatable recruitable access	Boundary
Fire	None	Requires Pretender, independent, summon, empowerment, or another verified bridge.

Path	Repeatable recruitable access	Boundary
Air	None	Requires an external bridge.
Water	Marshmaster W1; random depth to W2 or rarely W3	Sacred Crocodile requires W2.
Earth	None	Contact Scorpion Man requires both Earth and Fire.
Astral	Lizard Shaman S1; random Marshmaster S1 or rarely S2	Shaman already meets Contact Couatl's Astral requirement.
Death	Empoisoner D1; Marshmaster D2, random D3 or rarely D4	Native strength is repeatable but concentrated in Marshmasters.
Nature	Shaman and Empoisoner N1; Marshmaster N2, random N3 or rarely N4	Every Marshmaster meets Monster Toads' N2 requirement.
Glamour	None	Requires an external verified bridge.
Blood	None	Requires an external verified bridge.
Holy	Hierodule H1, High Priest H2, Lizard King H3, Shaman H1	Strong priest access is separate from research magic.

C'tis national ritual reconciliation

Ritual	Level	Requirement	Cost	Printed result
Sacred Crocodile	Conjuration 4	N2 W2	1 Nature gem	one Sacred Crocodile
Summon Monster Toads	Conjuration 5	N2	5 Nature gems	three Monster Toads
Contact Couatl	Conjuration 7	N1 S1	40 Nature gems	one Couatl
Contact Scorpion Man	Conjuration 8	E1 F1	12 Earth gems	one Scorpion Man

The manual and pinned nation restrictions agree on all four records. The table proves printed requirements, costs, and results. It does not prove summoned forms, item slots, command behaviour, battle performance, or later path access beyond the printed unit description.

C'tis ritual access ladder

Access class	Ritual	Repeatable route
Every Marshmaster	Summon Monster Toads	Fixed N2
Water-random Marshmaster	Sacred Crocodile	W2 plus fixed N2; 26.875% have at least one added Water level
Every Lizard Shaman	Contact Couatl	Fixed S1 N1
External Fire-and-Earth bridge	Contact Scorpion Man	No recruitable C'tis mage has Fire or Earth

Caster access must be joined to research, the correct gem type, a laboratory, and a free mage-turn. Contact Couatl is legally easy for the Shaman but costs forty Nature gems; Contact Scorpion Man has a modest cost but no native caster.

C'tis national item: The Jade Mask

The Jade Mask is item ID 226, a Construction 9 helmet requiring D6 N3 and twenty Death gems. The manual lists Death Magic +2, Magic Resistance +3, regeneration, poison resistance, fear, darkvision, and Rigor Mortis. The pinned item row restricts it to the three C'tis nation IDs 27, 75, and 113 and records no national rebate.

The restriction does not create the D6 N3 forger. A rare Marshmaster can reach D4 or N4, but no recruitable result supplies the complete threshold alone. Any forging plan must show the exact boosters, empowerment, summon, hero, Pretender, or other bridge rather than treating a national artifact as automatically available.

C'tis hero records

Fixed name	Unit name	Verified magic	Boundary
Niklatu	Lizard Hero	none	Hero record only
Murmur	Guild Master	D3 N3	Pinned late-hero value 5; timing unresolved
Kabti'ili	Ancient Shaman	S2 N2 H1	Hero record only
Nakhtun Eshash	Sobek High Priest	H3	Hero record only
Atun Shar	Sobek Sauromancer	W2 D3 N2	Pinned late-hero value 5; timing unresolved

These records can widen a particular game's priest and magic portfolio, but none belongs in a schedule that must work every game. The raw late-hero field is not translated into an arrival formula without a current authoritative explanation.

C'tis patch reconciliation

The current baseline is Dominions 6.36, released on 17 August 2026. The retained official ledger contains no directly named correction for C'tis, Miasma, Marshmaster, Empoisoner, Sobek, or the Jade Mask through that release.

This absence is not proof that every historical value was unchanged. The revision-2 manual controls current player-facing descriptions, while the pinned 6.35 data remains labelled as a structured cross-check. Any later discrepancy must be recorded rather than silently harmonised.

C'tis opening priorities

- 1 Check whether the first recruitment bottleneck is gold, resources, recruitment points, or commander turns.
- 2 Match spear lines, javelins, slaves, dual weapons, or elites to the reported province instead of defaulting to one unit.
- 3 Use ordinary commanders for expansion leadership where their capacity is enough.
- 4 Label every Marshmaster by final paths immediately.
- 5 Build additional mage recruitment so research and field support do not remain capital-dependent.
- 6 Track Water, Death, and Nature gems separately even though the capital provides all three.
- 7 Maintain a reserve for raiding, cold-weather problems, or replacement of slow armies.

These are planning controls, not tested expansion scripts. Exact party sizes, formations, scripts, target order, and casualty ranges remain open.

C'tis recruitment packages to compare

Cheap spear screen

Militia, Light Infantry, City Guard, and Slave Warriors provide several prices and levels of protection. They can cover space while expensive mages remain behind the line. Morale, leadership, cold, and the enemy's damage profile decide which mixture survives.

Protected infantry line

Heavy Infantry, City Guard, Falchioneers, and Elite Warriors trade more resources or recruitment points for armour, attacks, or skill. They should be compared against the local resource ceiling rather than assumed superior because their individual profile is stronger.

Capital sacred group

Swamp Guards and Sobek Sacred Guards convert the capital, resources, recruitment points, and any useful bless into sacred force. The larger Sobek is limited to two per month and costs heavily in every queue. A bless should be judged against the actual number and role of sacreds that can be delivered.

Sobek line

Sobek Warriors and Sacred Guards provide large, well-protected bodies with strong attacks. Their cost, size, resource demand, movement, fatigue, and replacement route matter as much as their raw durability.

Poison pressure group

Poison Slingers and Empoisoners create ranged or covert poison threats. Poison resistance, missile accuracy, target selection, friendly exposure, assassin battles, and the exact effect sequence remain matchup and runtime questions.

C'tis research response tree

Branch A: national Conjunction opening

Conjunction 4 and 5 unlock Sacred Crocodile and Monster Toads. Every Marshmaster can cast the toad ritual; a Water-random Marshmaster reaches the crocodile threshold. The branch uses Nature gems and should be compared against site searching and other Nature expenditure.

Branch B: Couatl bridge

Conjunction 7 unlocks Contact Couatl. Every Lizard Shaman has N1 S1, so the caster is repeatable even though the forty-gem cost is substantial. The summoned Couatl's printed paths can widen the portfolio, but its live strategic and battlefield behaviour remains untested here.

Branch C: high Conjunction and external paths

Conjunction 8 unlocks Contact Scorpion Man at E1 F1. C'tis has neither path on a recruitable mage. Researching the ritual before documenting a legal caster and Earth treasury creates a dead endpoint.

Branch D: Death and Nature support

Marshmasters naturally support Death and Nature research families, while Empoisoners and Shamans cover lower thresholds. The useful school depends on the opponent: protection, fatigue, undead, battlefield control, resistance, and troop survival all change the answer.

Branch E: Construction and path bridges

Construction can convert W/S/D/N access into generic items and later support the Jade Mask chain. The artifact itself sits at Construction 9 and D6 N3, so the forge plan must be written as a sequence of actual path gains and costs rather than a nation label.

C'tis battlefield packages

Infantry line with Marshmaster support

Ordinary spear or elite infantry holds space while a labelled Marshmaster casts from its actual W/S/D/N paths. A mundane commander handles leadership where possible. Cold, fatigue, friendly exposure, and enemy attack type determine which support package is legal and useful.

Sacred capital force

Swamp Guards and Sobek Sacred Guards form a smaller premium line under priest support. The package includes capital recruitment, resource limits, bless value, H1-H3 availability, and replacement time. Sacred status does not prove that the line fits every opponent.

Sobek striking group

Sobek Warriors or sacred guards provide large protected bodies for a chosen point of contact. Frontage, weapon reach, defence, fatigue, enemy armour answers, and route speed can all turn high individual statistics into poor conversion.

Poison and harassment package

Poison Slingers pressure at range while Empoisoners threaten commanders or isolated targets. This package is evidence-sensitive: poison resistance, patrols, bodyguards, scripts, accuracy, and assassination resolution must be checked rather than assumed.

C'tis information and pressure network

C'tis has no recruitable scout named in its national commander table, so ordinary independent scouting and other verified sources remain important. Empoisoners supply stealth and assassination, but using a 125-gold capital mage as an information tool carries queue and survival costs.

Miasma adds territorial pressure by changing the environment of dominion-covered land. That pressure does not reveal enemy orders or replace reports. The safe information plan layers scouts, province reports, reserves, and protected commanders while keeping unverified disease and conversion timing outside operational promises.

C'tis Pretender families

Family	What it can solve	What it must not conceal
Fire and Earth bridge	Makes Contact Scorpion Man legally reachable and can add missing site-search paths	A caster does not create an Earth treasury or Conjuraton 8.
Jade Mask forger	Supplies high Death/Nature or a shorter booster chain	Construction 9, twenty Death gems, and exact path steps still matter.
Economy and infrastructure	Funds forts, laboratories, temples, Marshmasters, and capital elites	Gold does not create local resources, recruitment points, or commander turns.
Sacred support	Improves the limited capital sacred line	The strongest sacred is capped at two per month and remains capital-only.
Awake expansion body	Reduces pressure on the slow early roster	Performance depends on map, scales, bless, chassis, and opponent evidence.

No exact design is endorsed without game settings, map, opponents, legal chassis, and versioned evidence.

C'tis matchup and failure matrix

Enemy problem	First answer to examine	Avoid
Massed light units	Protected line, dual attacks, poison pressure, summons, and reachable area effects	Spending the entire capital queue on a tiny elite group.
Heavy armour	Falchioneers, Sobek attacks, buffs, fatigue, poison where relevant, and armour-answering magic	Assuming spears and slings solve protection unaided.
Cold pressure	Resistance, fatigue control, shorter battles, alternative bodies, and route choice	Treating cold-blooded as flavour text.
Poison-resistant enemies	Conventional damage, magic, sacreds, and non-poison summons	Building the whole battle plan around Poison Slingers.
Fast flankers or flyers	Guards, reserves, layered lines, and mage spacing	Leaving Marshmasters exposed behind slow infantry.
Undead or lifeless forces	Priests, Death/Nature options, suitable summons, and physical damage	Assuming disease or poison affects every target.
Dominion resistance	Temples, priests, strategic concentration, and ordinary economic strength	Treating Miasma as guaranteed control without candles.
Raiding	Scouts, reserves, forts, and distributed recruitment	Depending on one slow capital army to answer every incursion.

Monthly C'tis audit

- Is each fort limited by gold, resources, recruitment points, or commander turns?
- Is the capital queue producing a specific specialist rather than merely the most expensive record?
- Is every Marshmaster labelled by final paths?
- Are mundane commanders handling work that does not require magic or priesthood?
- Are Miasma claims still limited to the exact qualitative evidence available?
- Are Water, Death, and Nature gem balances tracked separately?
- Does every national ritual have research, a legal caster, the correct gems, a laboratory, and a free mage-turn?
- Are heroes and rare double-randoms excluded from schedules that must be repeatable?

- Are cold, movement, supply, fatigue, poison resistance, and replacement routes checked before battle?
- Has any pinned 6.35 field been kept separate from current observed behaviour?

C'tis unresolved evidence boundary

The following remain open:

- 1 exact Miasma income increases and reductions, eligibility, rounding, and stacking;
- 2 disease-check frequency, hosting order, resistance, immunity, and ownership-change interactions;
- 3 swamp and drip-cave conversion rate, selection, timing, and interface display;
- 4 live 6.36 Marshmaster random-path presentation and timing;
- 5 exact cold-blooded fatigue outcomes across temperature, battle length, and unit profiles;
- 6 expansion-party sizes, formations, scripts, and casualty ranges;
- 7 Poison Slinger and Empoisoner targeting, poison, assassination, patience, and survival outcomes;
- 8 summoned-unit forms, magic, slots, leadership, and strategic-order behaviour;
- 9 hero arrival timing, late-hero field semantics, and live special behaviour;
- 10 the complete legal Jade Mask forging chain and final costs under combined modifiers;
- 11 disciple, allied-army, and underwater edge cases beyond the manual's explicit wording;
- 12 specific Pretender designs, blesses, matchups, and map performance;
- 13 R-047, R-058, and all other parked engine-dependent investigations.

These are evidence gaps, not invitations to guess. Runtime testing and preparation of new test assets remain paused.

Dossier source register

Official

- Dominions 6 Manual, revision 2: MA C'tis nation pages, Miasma, national rituals, forging, and fort construction.
- Illwinter official patch history through 6.36. No C'tis, Miasma, Marshmaster, Empoisoner, Sobek, or Jade Mask correction is inferred from a negative ledger search.

Structured snapshot

- Dominions 6 Data Inspector, commit cfac4311bc0b58053b8dead7bffb036ba9bd5dc, pinned to the 6.35 data update; used for nation identity, roster membership, random masks, capital sites, ritual restrictions, the Jade Mask restriction, and hero records.

Interpretation boundary

Roster entries, printed costs, paths, site income, ritual requirements, and pinned metadata are source facts. Openings, recruitment packages, research branches, force packages, Pretender families, and matchup responses are strategy. Exact Miasma income, disease checks, terrain conversion and hosting order, cold-blooded fatigue, summon forms, hero timing, assassination, and combat outcomes remain unresolved.
