Middle Age Man: Tower of Avalon

Man one-page command brief

Middle Age Man turns several modest recruitment pools into a flexible human army. Ordinary forts supply longbows, infantry, cavalry, scouts, spies, priests, and three levels of Avalon mage. Forests add Foresters and Royal Foresters, while non-fort provinces can raise Logrian troops, Monks, and Logrian Wise Men. The capital adds the sacred Wardens and Knights of Avalon, their commanders, and the Crone of Avalon.

The reliable core is easy to state:

- Longbowmen provide accurate, long-ranged mundane fire behind a line chosen for the target;
- Knights of Man give every fort a heavily armoured mobile recruit;
- Wardens and Knights of Avalon are powerful sacred capital troops, but their price and limited queue keep them scarce;
- Monks spread cheap H1 research beyond the main mage forts;
- Bards, Daughters, Mothers, and Crones are Spell singers with fixed Glamour access;
- Mothers provide the repeatable random portfolio, while capital Crones start at N3 G2 H1;
- Logrian Wise Men recruit outside forts and add low Earth plus Fire, Air, Earth, or Nature branches;
- the Forest and Tower of Avalon supply three Nature and two Glamour gems each month.

Man can recruit many different answers, but it cannot pay for all of them at once. Mothers cost 305 gold, capital Crones cost 465 gold and four commander recruitment points, Knights of Man cost 45 gold and 32 resources, and Knights of Avalon cost 90 gold and 32 resources. A plan that spends on every elite option can delay the forts and laboratories that make the roster useful.

Man evidence and ruleset

The scope is unmodded MA Man on the Book I 6.36 live baseline. The revision-2 official manual controls the player-facing roster, costs, recruitment locations, national summary, communion description, spells, and rituals. Random masks, object identifiers, capital sites, hero records, and nation restrictions are cross-checked against the pinned 6.35 Inspector export at commit `cfac4311bc0b58053b8dead7bffb036ba9bd5dc`.

The official 6.13 patch changed the Forest of Avalon from a +2 Magic increase to its intended +1. That correction is applied here. The patch ledger through 6.36 names no later MA Man roster or national-spell change, but the older structured snapshot is still labelled 6.35. A live display remains the final authority where the manual compresses a random scheme or the database carries a hidden casting restriction.

Man conversion chain

```
longbows, infantry, and ordinary knights
-> secure provinces and useful forests
-> forts, laboratories, and distributed recruitment
-> Monks, Spell singers, Mothers, and Logrian Wise Men
-> Chorus, Nature-Glamour support, and national summons
-> specialised field armies and imported missing paths
-> protected territory, sieges, and Throne operations
```

The chain tends to break at three points. Gold-heavy mages and cavalry can delay the next fort. The capital commander queue can be consumed by Crones before the army has enough leaders. Random Mothers and Wise Men can disappear into research without being labelled for the spell or forge branch their paths opened.

Man national rules that shape the plan

Rule or asset	Operational consequence
Standard forts	Man needs an ordinary fort-and-laboratory budget; terrain recruitment supplements the network but does not replace it.
Temples cost 300 gold	Religious infrastructure is cheaper than the ordinary 400-gold temple, but it still competes with mages, troops, and forts.
Weak priests and inspired researchers	Monks are H1 Mundane Researchers and can be recruited outside forts as well as in forts. They widen research and preaching without adding a magic path.
Forest recruitment	Foresters and Royal Foresters can be recruited in every forest. Forest ownership can therefore add stealth, patrol, and ranged recruitment away from a fort.
Non-fort recruitment	Logrian Slingers, Warriors, Cavalry, Monks, and Logrian Wise Men can be recruited outside forts according to the manual and structured membership tables.
Forest of Avalon	The capital site supplies three Nature gems, Wardens, Knights of Avalon, and their commanders; patch 6.13 sets its Magic increase to +1.
Tower of Avalon	The second capital site supplies two Glamour gems and the Crone of Avalon.
Communal Chants	Man's Spellsingers can cast Chorus Master and Chorus Slave. Book V owns the general communion rules and safety discussion.

Terrain recruitment is part of Man's economy. A forest can contribute scouts and Foresters before it has a fort, while an otherwise ordinary non-fort province can contribute a Monk or a random Wise Man. Those commanders still cost gold and recruitment time. The map offers more queues, not free capacity.

Man roster by job

Unit or group	Best job	Important limit
Logrian Slinger	Cheap ranged body from forts or outside them	Low protection and modest accuracy; the sling is not a substitute for the longbow line.
Longbowman	Long-ranged supporting fire	Needs a screen and a target for which mundane arrows matter; friendly troops still occupy the line of fire.
Spearman and Longspear	Inexpensive line and long-weapon control	Ordinary protection and damage; each version should be chosen for the opposing weapon and size mix.
Logrian Warrior	Javelin-and-axe reinforcement from forts or outside them	More expensive and resource-heavy than the basic line, with no shield against concentrated missiles.
Tower Guard	Better-defended sword line	Fourteen recruitment points and eighteen resources slow mass recruitment.

Unit or group	Best job	Important limit
Forester	Forest-surviving stealth archer, patrol support, and dispersed reinforcement	Light armour and a mixed weapon set; useful terrain access does not make it a heavy line unit.
Landless Knight	Armoured foot line with a broad sword	Better protection costs resources, while the unit still moves and fights as infantry.
Logrian Cavalry	Mobile reinforcement from forts or outside them	Rider 1 and a lightly protected War Horse make it the cheaper cavalry tier, not a Knight of Man.
Knight of Man	Heavy shock cavalry from any fort	Forty-five gold, 32 resources, 25 recruitment points, and separate rider and Destrier risks.
Warden of Avalon	Capital-only sacred great-sword infantry with True Sight	Twenty-six gold, 28 resources, and 33 recruitment points keep the unit specialised.
Knight of Avalon	Capital-only sacred unicorn cavalry	Ninety gold and 35 recruitment points; both the rider and Armored Unicorn must survive the attacks aimed at them.

The default army should not mix every row. Longbows need a line that holds for the expected approach. Cavalry needs space and a target worth charging. Wardens and Knights of Avalon need a bless and battle that justify spending the capital troop queue on them.

Man commander and mage portfolio

Commander	Paths or ability	Main jobs	Recruitment warning
Royal Forester	Stealth 55, Patrol +5, forest recruitment	Scouting, patrolling, stealth leadership, and moving Foresters	Leadership 10; it is a specialist, not a general army commander.
Castellan	Leadership 100	Ordinary field command	No priest or magic role.
Monk	H1, Mundane Researcher, outside-fort recruitment	Research, preaching, blessing, and light sacred support	Low morale and no non-Holy magic path.
Bard	G1, Spy, Spellsinger	Intelligence, Chorus participation, Glamour support	Two recruitment points for a narrow battle mage and spy.
Daughter of Avalon	N1 G1, Spellsinger	Core research, Chorus participation, Nature and Glamour support	Two recruitment points and no random path.
Mother of Avalon	N1 G1 H1 plus two random rolls, Spellsinger	Main random mage, Chorus, rituals, battlefield support, searching	305 gold and two recruitment points; the useful result must be labelled.
Lord Warden	Sacred, True Sight, Leadership 100	Capital command and elite infantry leadership	Capital-only commander turn and 170 gold.
Knight Commander of Avalon	Sacred mounted Leadership 100	Mobile capital command and sacred cavalry leadership	Capital-only, 210 gold, with a separate Armored Unicorn mount.
Crone of Avalon	N3 G2 H1 plus randoms, Spellsinger	High Nature and Glamour, national rituals, Chorus master, searching	Capital-only, 465 gold, and four recruitment points.
Logrian Wise Man	E1 plus FAEN random, Research -4, non-fort recruitment	Elemental branch access, Earth support, searching, and forging	125 gold and two recruitment points for reduced research efficiency.

The capital queue should answer a current need. A Crone gives paths and ritual certainty. A Lord Warden or Knight Commander moves an elite force. Recruiting the expensive mage every turn without funding armies, forts, and field leaders can leave Man rich in theory and slow on the map.

Reading Avalon's random paths

Mother of Avalon distribution

The manual prints the Mother as N1 G1 H1 with two random levels. The pinned record resolves two guaranteed and independent rolls:

- 1 one level from Nature or Glamour;
- 2 one level from Water, Earth, or Nature.

The six combinations are equally likely.

Final paths	Probability per Mother
W1 N2 G1 H1	16.67%
E1 N2 G1 H1	16.67%
N3 G1 H1	16.67%
W1 N1 G2 H1	16.67%
E1 N1 G2 H1	16.67%
N2 G2 H1	16.67%

A Mother has a 50% chance to reach G2, a 33.33% chance to gain Water, a 33.33% chance to gain Earth, a 66.67% chance to reach at least N2, and a 16.67% chance to reach N3. Four independent Mothers give about a 93.75% chance of at least one G2 result, 80.25% for at least one Water result, 80.25% for at least one Earth result, and 51.77% for at least one N3 result.

These chances describe recruitment, not timing guarantees. A G2 Mother owns Geas, Summon Cu Sidhe, and the Glamour threshold of Herd of Unicorns. Water and Earth Mothers open different general spell and forge branches. An N3 Mother reaches thresholds that the ordinary Daughter cannot.

Crone of Avalon distribution

Every Crone begins at N3 G2 H1. The pinned 6.35 record then gives:

- one guaranteed level chosen equally from Air, Water, Earth, Nature, or Glamour;
- an independent 10% chance of a second level from the same five-path set.

The guaranteed result is 20% for each named path. Including the second roll, the chance of receiving at least one chosen path is 21.6%. Ten percent of Crones receive two random levels; two percent receive both levels in the same path, and eight percent receive two different paths.

The current manual compresses the Crone to ?1 and does not expose that 10% second slot on the nation page. This dossier keeps the extra roll labelled as pinned structured evidence until a live 6.36 recruitment card or another current official source resolves the display.

Logrian Wise Man distribution

The Logrian Wise Man has fixed E1 and one guaranteed level chosen equally from Fire, Air, Earth, or Nature.

Final paths	Probability per Wise Man
F1 E1	25%
A1 E1	25%

Final paths	Probability per Wise Man
E2	25%
E1 N1	25%

For any named result, $1 - 0.75^n$ gives the chance of seeing at least one after n independent recruits. That is about 57.8% after three, 76.3% after five, and 94.4% after ten. The expected wait is four recruits, but the non-fort provinces, gold, commander points, and laboratories needed to use the result still have to exist.

National spells and caster access

Spell	School and requirement	Native caster	Planning use and boundary
Chorus Master	Thaumaturgy 1, G1, Spellsinger	Bard, Daughter, Mother, or Crone	Starts the master side of Man's national Chorus. The official manual limits it to Spellsingers.
Chorus Slave	Thaumaturgy 1, G1, Spellsinger	Bard, Daughter, Mother, or Crone	Starts the slave side. Caster count, path mix, fatigue, timing, and retreat safety must be planned together.
Summon Black Dogs	Conjuration 2, D2, 5 Death gems	No recruit or listed national hero has D2	Summons 20 Black Dogs. Owning the ritual does not create its caster.
Summon Cu Sidhe	Conjuration 3, G2, 5 Glamour gems	Crone or G2 Mother	Summons 10 sacred Cu Sidhe. Research, gems, commander capacity, and the army that will lead them all matter.
Geas	Thaumaturgy 3, G2	Crone or G2 Mother	National combat control. Target selection, resistance checks, and battle value remain context dependent.
Summon Barghests	Conjuration 4, D2, 7 Death gems	No recruit or listed national hero has D2	Summons 14 sacred Barghests. A Pretender, summon, empowerment, or independent path must supply the missing Death caster.
Herd of Unicorns	Conjuration 4, G2 N1, 10 Glamour gems	Crone or G2 Mother	Summons 10 sacred Unicorns. The pinned record also restricts the source province to forest terrain; check the current spell card before committing the gems.

The Death rituals are the clearest access warning. Man owns them nationally, but its repeatable roster and six listed national heroes contain no Death path. Researching those spells before building a real D2 route creates no casting capacity.

Man national item boundary

The revision-2 manual does not list a separate Man item portfolio, and the pinned Basel register has no nation-57 restriction or rebate record. Man can still forge ordinary items when a mage meets their paths. Those designs remain general objects, not national equipment.

This matters for planning. A Water or Earth Mother and an elemental Wise Man may open useful forging thresholds, but their random path does not create a discount. Item cost, booster order, and replacement access should be checked before a rare mage is assigned to repeated forging.

Man opening priorities

The opening has six linked jobs:

- 1 identify which nearby provinces need longbows, shields, long weapons, cavalry, or a different answer;
- 2 preserve enough gold for the first infrastructure target while recruiting a line that can protect the archers;
- 3 use forests and safe non-fort provinces as extra recruitment points where the map supports them;
- 4 begin Monk, Daughter, Mother, or Bard recruitment without leaving the armies short of leadership;
- 5 decide whether the capital commander queue needs a Crone, Lord Warden, or Knight Commander;
- 6 label every Mother, Crone, and Wise Man as soon as its paths are known.

Recruitment packages to evaluate from reports

Package	Intended target	Failure signal
Spear line with Longbowmen	Ordinary infantry and lightly protected targets	The line breaks before the arrows matter, or shields and armour make the volleys inefficient.
Tower Guard or Landless Knight screen	Stronger conventional melee and missile pressure	Resources buy too few bodies, or armour-negating attacks remove the investment.
Knight of Man reserve	Exposed flanks, ranged troops, and time-sensitive reinforcement	Anti-large weapons, control, or mount losses turn the charge into an expensive trade.
Logrian mixed reinforcement	Provinces where outside-fort recruitment adds useful bodies quickly	The local queue consumes gold without producing a coherent formation.
Warden or Knight of Avalon core	Battles where the bless and sacred traits answer a known threat	Capital scarcity and losses cost more than an ordinary troop solution.

These are report templates, not fixed expansion counts. Independent strength, formations, scales, bless, terrain, and combat rolls change the required party. No battle result is invented here.

Man research response tree

Branch A: fixed Glamour support

Thaumaturgy 1 gives every Spellsinger access to Chorus Master and Chorus Slave. Alteration 2 gives G1 Blur and Mirror Image. Thaumaturgy 3 gives G1 Luck and the national G2 Geas. This branch is available before a rare elemental random appears, but each spell still needs a protected caster and a battle where its effect matters.

Chorus is a force multiplier, not a substitute for planning. Masters and slaves should be counted before the script is chosen. Book V records the official rule that an unconscious Chorus Slave leaves the Chorus; the field plan must account for the resulting path and fatigue change.

Branch B: national summons

Conjuration 3 opens Summon Cu Sidhe to every Crone and half of Mothers. Conjuration 4 adds Herd of Unicorns to the same casters because they also meet N1. The capital already receives three Nature and two Glamour gems each month, but that income must also support battlefield gems, searching, and any other rituals.

Summon Black Dogs and Summon Barghests sit on the same research branch but need D2. They should remain a future option until the nation actually owns a Death caster.

Branch C: Nature protection and pressure

Crone access makes N3 dependable from the capital. Enchantment 3 gives Regeneration to N3, Conjuration 5 gives Howl to N3 with three Nature gems, and Alteration 6 gives Wooden Warriors to N3 with one Nature gem. Mothers add repeatable lower Nature and a one-in-six N3 result.

The choice depends on the army and opponent. Protection does not answer every elemental or armour-negating attack. Regeneration does not prevent a unit from dying to a single large hit. Howl and other battlefield pressure still depend on placement, duration, and the enemy's rear security.

Branch D: Logrian Earth and elemental access

Every Wise Man can cast the E1 Earth Grip at Alteration 1. The 25% E2 result reaches Strength of Giants at Enchantment 1, Earth Meld at Alteration 3, and Summon Earthpower at Conjuration 3. Fire, Air, and Nature results widen searching and low-path utility, but one random level does not make Man a deep elemental nation.

Research should follow the recruited result. A plan that assumes an E2 Wise Man on a fixed turn has only a 25% success chance per recruit. If the branch matters, recruit across several eligible provinces and keep a fallback that uses fixed Nature and Glamour.

Man battlefield packages

Longbow line

A Castellan or other suitable commander holds the infantry line while Longbowmen fire from protected positions. The line type is selected from the report: spears for cheap frontage, longer weapons for the right approach, or heavier troops when ordinary protection is the limiting factor. More archers do not repair a screen that collapses too early.

Cavalry reserve

Knights of Man or the cheaper Logrian Cavalry wait for a flank, rear, or reinforcement job. Their riders and mounts are separate creatures under Dominions 6. Formation, charge lanes, anti-large weapons, and the survival of both parts remain battle questions.

Avalon sacred force

Wardens bring capital-only sacred infantry with True Sight. Knights of Avalon add sacred Armored Unicorns and mobility. The bless should solve an identified weakness or improve a job the units already perform. Capital scarcity means they should not be treated as a mass replacement for ordinary infantry and cavalry.

Spellsinger cell

Bards and Daughters provide cheap G1 Chorus bodies, while Mothers and Crones bring the paths that benefit from the Chorus. The cell needs a clear master-slave count, script, gem allocation, guard plan, and retreat route. Losing the cell can remove both battle magic and a large block of research.

Distributed recruitment column

Forests add Royal Foresters and Foresters. Non-fort provinces add Logrian troops, Monks, and Wise Men. This can replace losses and widen research without waiting for every fort, but the resulting pieces still need commanders, laboratories where required, supply, and a route to the front.

Man Pretender families

Family	What it solves	What it must not conceal
Economy and infrastructure	Pays for 305-gold Mothers, 465-gold Crones, cavalry, forts, laboratories, and temples	More income does not remove capital turns, commander points, or resource limits.
Sacred support	Improves Wardens, Knights of Avalon, and national sacred summons	Most ordinary Man troops remain mundane, while the best sacred recruits are capital-only.
Death bridge	Supplies the missing D2 for Black Dogs and Barghests and may open broader Death work	One Pretender is not distributed access; searching, gems, timing, and replacement still matter.
Elemental bridge	Makes a required Fire, Air, Water, or Earth threshold dependable instead of waiting on randoms	The bridge should name its first search, forge, ritual, and battlefield job.
Early tempo	Covers an opening that the available troop mix cannot handle safely	Lost scales, afflictions, and chassis risk may cost more than the early provinces gained.

Man already has strong Nature and Glamour. A Pretender earns its cost by repairing a real bottleneck, supporting the scarce sacreds, or improving the economy that recruits the roster. Adding more of an existing path without a funded job can leave the original problem untouched.

Man matchup and failure matrix

Enemy problem	First answer to examine	Avoid
Shielded or heavily armoured line	Cavalry pressure, Earth support from Wise Men, control, sacreds, or imported damage	Assuming another block of mundane arrows will solve protection by itself.
Fast flankers and flyers	Protected rear positions, reserves, guards, wider formations, and local commanders	Leaving Longbowmen and Spellsingers as one exposed rear cluster.
Large units and cavalry	Long weapons, layered lines, control, and concentrated fire	Sending expensive cavalry into the enemy's preferred anti-large fight.
High Defence, Glamour, or ethereal targets	Area effects, buffs, True Sight assets, magic weapons, and researched control	Treating high arrow volume as guaranteed contact.
Armour-negating or elemental magic	Spacing, resistance, pressure on casters, summons, and shorter exposure	Buying heavier human armour against damage that ignores it.
Mind and MR attacks	Better-MR Avalon troops, buffs, spacing, imported Astral, and target-specific counters	Assuming a sacred tag protects ordinary soldiers from MR checks.
Raiding and dispersed pressure	Forest recruitment, non-fort queues, scouts, Bards, cavalry, and prepared local leaders	Keeping every useful commander and mage in the capital.
Attrition and mage loss	Monks for distributed research, protected rare randoms, reserves, and retreat planning	Risking the only Water, Earth, Fire, or Air result in routine frontline work.

Monthly Man audit

- Is the next gold piece buying troops, a field leader, a mage, or the infrastructure that multiplies later recruitment?
- Does every Longbowman group have a line that can hold for the expected approach?
- Are forests contributing Royal Foresters or Foresters where that queue is useful?
- Are safe non-fort provinces producing the right Logrian unit, Monk, or Wise Man?
- Is the capital commander queue solving a path or leadership shortage?
- Are Mother, Crone, and Wise Man randoms labelled by final paths and assigned jobs?
- Does the current research target have a legal caster already recruited?
- Are Nature and Glamour gems divided between battle use, summons, and reserves before spending begins?
- Is a Chorus sized and scripted around its actual masters and slaves?
- Do the Death rituals have a real D2 route, or are they only names in the spell list?
- Are capital sacred losses justified by the battle and supported by the bless?
- Can the research stack survive a raid, assassination attempt, or forced retreat?

Man unresolved evidence boundary

The following claims remain open:

- 1 exact expansion-party ranges for each line, longbow, cavalry, and sacred package;
- 2 live 6.36 display confirmation of the two Mother rolls, the Wise Man mask, and especially the Crone's pinned 10% second random;
- 3 current spell-card confirmation of Herd of Unicorns' forest-source restriction;
- 4 Chorus fatigue, casting-time, path-boost, unconscious-slave, and script outcomes in specific battles;
- 5 Geas target choice, resistance, and practical value against different formations;
- 6 rider-and-mount survival outcomes for Logrian Cavalry, Knights of Man, and Knights of Avalon;
- 7 the economic payback of distributed Wise Man and Monk recruitment on different maps;
- 8 hero arrival timing and the value of late elemental or Astral access;
- 9 modded Man variants, which remain separate from this unmodded chapter.

These questions stay visible without becoming guessed conclusions or new test assets. R-047, R-058, and the rest of the hands-on runtime queue remain parked.

Dossier source register

Official

- Dominions 6 Manual, revision 2: all 37 unmodded Middle Age nation pages; national spells and rituals; research; communions, Chorus, and Grand Communion; Blood and crossbreeding; Inquisition; mounts; sailing; flying; forging; habitat transitions; and fort construction.
- Illwinter official patch history through 6.37, including the current Send Aatxe restriction, communion corrections, the 6.13 Forest of Avalon Magic correction, the 6.01 Abysia wall-defender note, Eriu's 6.01 terrain-recruit and Bean Sidhe corrections, Agartha's 6.04 Oracle-shape note, and 6.37's bounded research, drowning, and Drake corrections. Generic statistic fixes are not assigned to unnamed nation objects.

Structured snapshot

- Dominions 6 Data Inspector, commit `cfac4311bc0b58053b8dead7bfffbc036ba9bd5dc`, pinned to the 6.35 data update; used for mage random masks, recruitment records, capital sites, national spell restrictions, national item fields, and current object cross-checks.

Interpretation boundary

Roster entries, path masks, costs, site income, item restrictions, and national ritual requirements are source facts. Openings, research trees, Pretender families, battlefield packages, and matchup advice are strategy. Expansion counts, random-result timing, Blood returns, crossbreeding outputs, displayed forge-cost stacking, communion and Grand Communion outcomes, hydra-field behaviour, Spell Singer outcomes, Glamour detection, special-dominion scaling and targeting, ancestor-summon behaviour, conscription output, variable summon quantities, retinue and shape behaviour, flying and storm resolution, ice-equipment scaling, Guardian Spirit behaviour, remote ritual outcomes, spell targeting, and combat outcomes remain observation questions until a versioned raw set is published.
