Middle Age Pangaea: Age of Bronze

Pangaea one-page command brief

Middle Age Pangaea turns forests, mobile halfmen, recuperating troops, broad Nature magic, and a small capital Blood branch into strategic reach. Ordinary forts offer the full conventional roster, while forests add cheap local recruitment and sacred Hierophants. The capital contributes Pandemoniacs and White Centaurs through separate sites. Pans are the main research and ritual engine; Dryads and the two Hierophant families provide cheaper priesthood and random Water, Earth, Nature, or Glamour access.

The basic plan is:

- use forest recruitment to widen replacement and raiding capacity without pretending it replaces forts;
- match cheap Satyrs, missile Centaurs, protected Hoplites, mobile Warriors, and trampling Minotaurs to the reported target;
- label every Hierophant, Hierophantide, Dryad, Pan, and Pandemoniac by final paths as soon as recruitment completes;
- spend mundane commander turns on ordinary leadership so expensive mages remain available for research, searching, rituals, and battle magic;
- treat recuperation as a documented national advantage while leaving its exact eligibility, rate, and timing unresolved;
- connect each national ritual to its actual caster, research level, gem treasury, laboratory, terrain, and free mage-turn;
- protect secondary forests and forts so losses do not reduce the nation to one capital queue.

Pangaea converts forests, gold, resources, recruitment points, mage-turns, and Nature gems into mobility and repeated pressure. Its main risks are expensive researchers, uneven protection, low morale among cheap troops, capital congestion, narrow native answers outside Earth and Nature, and overconfidence in stealth, trample, berserk, recuperation, or Magical Tunes without matchup evidence.

Pangaea evidence and ruleset

This chapter covers unmodded Middle Age Pangaea on the Book I 6.36 live baseline. The revision-2 official manual controls the player-facing roster, costs, recruitment markings, visible paths, national summary, capital sites, spell tables, and ritual descriptions. Nation ID 52, recruitment memberships, random masks, site fields, spell restrictions, the absence of national item rows, and hero assignments are cross-checked against the pinned 6.35 Inspector export at commit `cfac4311bc0b58053b8dead7bffb036ba9bd5dc`.

The sources do not prove exact recuperation checks, live recruitment-interface grouping, stealth outcomes, tune resolution, ritual implementation, hero timing, or battle performance. Those remain unresolved. No runtime test, replay, save, or new test asset was used for this dossier.

Pangaea conversion chain

forests, cheap local recruits, mobile troops, capital specialists, and Nature income
-> provinces, protected forest nodes, forts, temples, laboratories, and scouting reach
-> labelled Hierophants, Dryads, Pans, Pandemoniacs, and preserved mage-turns
-> research, searching, tunes, rituals, forging, and battlefield support
-> surviving armies, replacements, raids, sieges, claims, and strategic depth

The fragile arrows are morale, armour, capital congestion, the cost of Pans, limited native Astral and Death access, and incomplete knowledge of several special abilities. Forest access and stealth create options, but neither supplies information automatically or guarantees a successful raid.

Pangaea national rules that shape planning

Rule or asset	Source-backed fact	Planning consequence
Forest beings	The roster is dominated by units with Forest Survival, and eleven records have explicit forest recruitment.	Forest provinces can become recruitment and movement nodes, but local capacity still depends on ownership, infrastructure, and queue limits.
Recuperating troops	The manual says troops heal battle afflictions and marks the roster with Recuperation.	Valuable survivors may recover, but no exact chance or timing is budgeted.
Stealth	Most light Satyr and Centaur lines, all five mage families, and both forest commanders carry Stealth.	Scouting, concentration, and raiding options improve, but detection and movement outcomes remain evidence questions.
Growth limit	Pretender design has a Growth limit of +1.	Scale planning can lean toward population and supplies, but the limit is not itself an economic recommendation.
Primitive Forts	The nation uses the Primitive Fort family.	Fort cost, build time, administration, and siege strength must be taken from the current fort table rather than assumed from the label.
Forest temples	Temples cost 300 gold in forests.	Forest dominion infrastructure receives a clear discount and should be considered alongside laboratories and forts.
Magical Tunes	Three national Enchantment-0 spells require N1 and five fatigue.	Nature casters gain immediate battlefield options, while their exact live behaviour remains unresolved.

Pangaea recruitment geography

The ordinary fort roster contains eight commanders and fourteen troops. The capital adds Pandemoniac and White Centaur through Hidden Grove and The Grove of Gaia. Forests separately recruit four commanders and seven troops: Black Harpy, Satyr Commander, Centaur Hierophant, Centauride Hierophantide, Harpy, Satyr Sneak, both basic Satyr variants, Minotaur, Centauride, and Centaur.

These categories overlap rather than replace one another. A forest fort can access ordinary-fort records as well as forest recruits, while an unfortified forest can provide the explicit terrain group. The exact live interface and every terrain edge case were not observed, so the chapter treats the structured memberships as legal-source boundaries rather than a screenshot of the current client.

Complete Pangaea commander membership

Commander	Gold	Resources	Rec points	Verified recruitment
Black Harpy	35	1	1	Forts and forests
Satyr Commander	60	23	1	Forts and forests
Minotaur Lord	95	31	1	Forts
Centaur Commander	105	32	1	Forts
Centaur Hierophant	170	4	2	Forts and forests
Centauride Hierophantide	170	3	2	Forts and forests
Dryad	310	1	2	Forts
Pan	425	1	4	Forts
Pandemoniac	355	1	4	Capital only

Nine commander records reconcile. Forests can supply cheap scouts, ordinary leadership, and both H1 random-mage families without consuming a fort's ordinary commander identity. Pans and Dryads remain fort recruits; the Blood-capable Pandemoniac remains capital-only.

Pangaea commander jobs

Commander	Source-backed role	Important limit
Black Harpy	Flying stealth scout and very cheap commander	Leadership 10 restricts army command.
Satyr Commander	Stealth leader for ordinary troops	Twenty-three resources compete with protected units.
Minotaur Lord	Protected leadership-75 trampler	No magic; resource-heavy and matchup-dependent.
Centaur Commander	Mobile leadership-100 commander	Thirty-two resources and Inspirational -1 make the role costly.
Centaur Hierophant	Sacred H1 with E/N random and longbow	Two recruitment points and only one magic level.
Centauride Hierophantide	Sacred H1 with W/N random and short bow	Two recruitment points and only one magic level.
Dryad	Sacred N1 H2 mage-priest with W/E/N/G random, Awe, and Seduction	310 gold; seduction resolution and survival remain untested.
Pan	E2 N3 random mage and main researcher	425 gold and four recruitment points create a large opportunity cost.
Pandemoniac	Capital N3 B2 mage with a rare E/N/B random	Capital-only, four recruitment points, and no priest path.

Complete Pangaea troop membership

Troop	Gold	Resources	Rec points	Verified recruitment
Harpy	7	1	3	Forts and forests
Satyr Sneak	9	3	6	Forts and forests
Satyr, spear and javelin	9	4	6	Forts and forests
Satyr, spear only	9	4	6	Forts and forests
Satyr Hoplite	14	24	24	Forts

Troop	Gold	Resources	Rec points	Verified recruitment
Reveler	16	3	14	Forts
Centaur	25	4	12	Forts and forests
Centauride	25	3	12	Forts and forests
Centauride Warrior	30	11	17	Forts
Centauride Cataphract	30	28	17	Forts
Centaur Cataphract	35	32	21	Forts
Centaur Warrior	35	11	21	Forts
Minotaur	40	6	6	Forts and forests
War Minotaur	50	23	18	Forts
White Centaur	55	12	29	Capital only, sacred

Fifteen troop records reconcile. The two basic Satyrs share a displayed name but remain separate objects with different weapons and Defence. The roster offers cheap bodies, bows, javelins, protected formations, mobile striking units, tramlers, berserkers, and a capital sacred rather than one universal line.

Pangaea troop jobs

Troop	Source-backed role	Important limit
Harpy	Cheap flying stealth body	Low morale and protection restrict direct fighting.
Satyr Sneak	High-stealth spear screen	Light protection and Morale 9 demand leadership and target selection.
Satyr with javelin	Cheap spear body with one ranged option	Still lightly protected and low-morale.
Satyr with spear	Slightly higher Defence than the javelin variant	Gives up the ranged weapon.
Satyr Hoplite	Protected spear line	Heavy resource and recruitment-point demand.
Reveler	Stealthy berserking spear-and-hoof attacker	Light armour and berserk commitment can become liabilities.
Centaur	Mobile longbow unit with hoof attack	Low protection and cost require useful range and positioning.
Centauride	More precise shortbow unit	Shorter weapon range and light protection.
Centauride Warrior	Fast high-Defence spear, hoof, and javelin fighter	Moderate protection remains vulnerable to the wrong attack.
Centauride Cataphract	Armoured lance, hoof, and javelin fighter	High resources and encumbrance reduce easy replacement.
Centaur Cataphract	Heaviest protected lance body	Thirty-two resources and modest Defence create matchup dependence.
Centaur Warrior	Mobile lance-and-hoof berserker	More exposed than the cataphract line.
Minotaur	Cheap-for-size trampler and berserker	Low Attack and Defence make trample target selection important.
War Minotaur	Better-armoured trampling line	More resources and encumbrance without solving every counter.
White Centaur	Capital sacred mobile striker	Capital-only, expensive, and recruitment-point heavy.

Recuperation evidence boundary

The manual marks every national commander and troop with Recuperation and summarizes the nation as having troops that heal battle afflictions. This supports treating affliction recovery as part of the roster's long-term value.

It does not establish which afflictions qualify, the chance per turn, whether commanders and troops follow identical rules, when checks occur, or every interaction with healing, disease, transformation, and temporary forms. The dossier therefore tracks valuable survivors without predicting a recovery date.

Reading Pangaea's random paths

Recruit	Fixed magic	Random structure
Centaur Hierophant	H1	Guaranteed E1 or N1, 50% each
Centauride Hierophantide	H1	Guaranteed W1 or N1, 50% each
Dryad	N1 H2	Guaranteed W1, E1, N1, or G1, 25% each
Pan	E2 N3	Guaranteed E1 or N1, then an independent 10% E1/N1/B1 roll
Pandemoniac	N3 B2	Independent 10% E1/N1/B1 roll

These probabilities are derived from pinned masks 9216, 8704, 26112, and 41984. They are portfolio probabilities, not promises about a finite recruitment run or claims about the live display order.

Pan final-path portfolio

Final paths	Probability
E3 N3	45%
E2 N4	45%
E4 N3	1.667%
E2 N5	1.667%
E3 N4	3.333%
E3 N3 B1	1.667%
E2 N4 B1	1.667%

Every Pan gains either Earth or Nature. A named primary path appears at least once on 51.667% of Pans because the rare roll can repeat it; double Earth and double Nature each occur on 1.667%. Rare depth is useful when it appears but should not be scheduled before recruitment.

Pandemoniac rare-path portfolio

Every Pandemoniac begins N3 B2. Ninety percent receive no additional level. Earth, Nature, and Blood each occur on 3.333% of recruits, producing E1 N3 B2, N4 B2, or N3 B3 respectively.

This capital line is the only repeatable native Blood access. A B3 result is possible but rare, so a Blood plan should distinguish the guaranteed B2 floor from a branch that may take many capital recruitments to appear.

Pangaea native path boundary

Path	Repeatable recruitable access	Boundary
Fire	None	Requires Pretender, independent, summon, empowerment, or another verified bridge.
Air	None	Hero Arcopythera is not a repeatable solution.
Water	W-random Hierophantide or Dryad at W1	No recruitable native depth beyond W1.
Earth	Pan E2, usually E3 and rarely E4; E-random Hierophant or Dryad at E1	Strong repeatable Earth is concentrated in expensive Pans.
Astral	None	Requires an external bridge.
Death	None	Requires an external bridge.
Nature	Dryad N1; Pan N3, usually N4 and rarely N5; Pandemoniac N3 or rarely N4	Nature is the broadest and deepest native path.
Glamour	G-random Dryad at G1	Repeatable chance, but only one-quarter of Dryads.
Blood	Pandemoniac B2 or rarely B3; rare Pan B1	Guaranteed access is capital-only.
Holy	Hierophants H1; Dryad H2	Priest access exists in forests and forts.

Pangaea capital sites and gem economy

Site	ID	Verified fields
The Grove of Gaia	14	N5 monthly gems; Growth scale limit 2; White Centaur recruitment record
Hidden Grove	19	Pandemoniac recruitment record

The capital produces five Nature gems each month. That income directly matches all three national rituals, but it does not make every ritual affordable on schedule: research, caster access, other Nature spending, and mage-turn competition still matter.

Pangaea national Magical Tunes

Spell	Level	Requirement	Cost	Printed fields
Tune of Fear	Enchantment 0	N1	5 fatigue	Range 0, area 25; armour-negating, mind-affecting boundary
Tune of Growth	Enchantment 0	N1	5 fatigue	Range 0, area 25
Tune of Dancing Death	Enchantment 0	N1	5 fatigue	Range 0, area 25; 31+ damage, armour-negating, magic resistance applies

All three spells are national, immediately researched, and printed as unusable underwater. Every Dryad, Pan, and Pandemoniac meets N1; Nature-random Hierophants and Hierophantides also qualify. Legal access does not establish whether a tune is tactically safe or effective.

Magical Tune evidence boundary

The manual establishes requirements, fatigue, range, area, broad targeting text, damage where printed, resistance fields, and the underwater prohibition. It does not fully establish target selection, pulse timing, friendly inclusion, mind-immunity handling, interruption, or how the area is placed in a live battle.

The dossier therefore treats the Tunes as available tools that require report-driven scripting. It does not promise a morale break, regeneration outcome, or damage result against a particular formation.

Pangaea national ritual reconciliation

Ritual	Level	Requirement	Cost	Printed result
Monster Boar	Conjuration 5	N3	10 Nature gems	Anonymous remote Monster Boar that creates unrest until found and slain
Awaken Hamadryad	Enchantment 5	N4	25 Nature gems	One Hamadryad
Fort of the Ancients	Alteration 5	N4	35 Nature gems	Complete fortress in a forest or shallow-sea province

The manual and pinned nation restrictions agree on all three records. Printed requirements, costs, and headline results are source facts. Remote resolution, retinue realization, exact summoned abilities, terrain edge cases, fort type, and hosting order remain open.

Pangaea ritual access ladder

Access class	Ritual	Repeatable route
Every Pan or Pandemoniac	Monster Boar	Fixed N3
Nature-primary Pan	Awaken Hamadryad and Fort of the Ancients	N4 on 50% of Pans before the rare roll
Any Pan with at least one added Nature level	Awaken Hamadryad and Fort of the Ancients	51.667% when the rare roll is included
Rare Pandemoniac	Awaken Hamadryad and Fort of the Ancients	N4 on 3.333% of Pandemoniacs

The manual's Hamadryad description prints N3, Growth Power 1, Research -4, and a 3d6 Harpy retinue. Those fields help identify the intended result but do not establish live retinue rolling, persistence, shapes, or every command interaction. Fort of the Ancients additionally requires a legal target province; Monster Boar additionally requires a useful remote target and tolerance for uncertain resolution.

Pangaea national item boundary

The pinned BaseI.csv snapshot assigns nation 52 to none of its restriction or nation-rebate fields. The supported conclusion is narrow: there is no pinned Pangaea-restricted or Pangaea-rebate item record.

Pangaea still forges general items through its actual paths. Strong Earth and Nature on Pans support a substantial generic Construction portfolio, while Water, Glamour, and Blood branches require labelled recruits. No item chain is treated as free merely because the nation can eventually reach its path.

Pangaea hero records

Fixed name	Unit name	Verified magic	Boundary
Rams Head	White Satyr	none	Hero record only
Arcopythera	Harpy Queen	A2 N2	Hero record only
Taurotyrannos	Black Bull	E1 N3 B3	Pinned late-hero value 5; timing unresolved

These heroes can widen a particular game's mobility or magic portfolio, especially into Air or deeper Blood. None belongs in a repeatable research, forging, or ritual schedule. The raw late-hero field is not translated into a turn or probability formula.

Pangaea patch reconciliation

The current baseline is Dominions 6.36, released on 17 August 2026. The retained official ledger contains no directly named correction for Pangaea, Pandemoniac, Hamadryad, Monster Boar, Fort of the Ancients, or the national Tunes through that release.

This absence is not proof that every historical value was unchanged. The revision-2 manual controls current player-facing descriptions, while the pinned 6.35 data remains labelled as a structured cross-check. Any later discrepancy must be recorded rather than silently harmonised.

Pangaea opening priorities

- 1 Identify whether gold, resources, recruitment points, or commander turns limit the first expansion cycle.
- 2 Use province reports to choose cheap Satyrs, missiles, protection, mobility, or trample instead of defaulting to one troop.
- 3 Recruit mundane leadership where magic is unnecessary.
- 4 Label every random mage immediately and keep rare branches out of guaranteed schedules.
- 5 Secure useful forests for local replacement, scouting reach, and discounted temples.
- 6 Build additional fort and laboratory capacity before Pan recruitment becomes a single-queue bottleneck.
- 7 Track the Nature treasury against rituals, searching, forging, and emergency battlefield use.
- 8 Keep a mobile reserve for raiding, flankers, and replacement of stealth forces that fail.

These are planning controls, not a tested expansion script. Exact party sizes, formations, scripts, target order, stealth routes, and casualty ranges remain open.

Pangaea recruitment packages to compare

Cheap forest screen

Satyr Sneaks and the two basic Satyr variants provide inexpensive spear bodies from forts or forests. The javelin version adds one ranged attack, while the spear-only version has higher Defence. Low Morale and light protection make leadership, numbers, and the enemy attack profile decisive.

Protected Bronze line

Satyr Hoplites and both Cataphracts trade large resource costs for protection and stronger contact profiles. This package suits resource-rich forts and known physical threats, but it should not consume every queue when mobility, missiles, or cheap replacement matter more.

Centaur missile group

Centaurs and Centaurides combine bows, speed, stealth, and hoof attacks. Longbow range and shortbow precision create different roles. Their low protection means that missile exchange, formation, screening, and fast enemy contact require explicit planning.

Mobile warrior wing

Centauride Warriors and Centaur Warriors provide speed, Defence, javelins or lances, and extra contact attacks. They can reinforce or pressure distant provinces, but cost, frontage, berserk behaviour, and enemy attack accuracy can reverse their paper advantage.

Minotaur trample group

Minotaurs and War Minotaurs offer size, strength, trample, and berserk. The cheaper forest Minotaur is easy to distribute; the War Minotaur adds armour at greater resource cost. Size of target, formation, fatigue, morale, and anti-large damage remain essential matchup questions.

Capital White Centaur reserve

White Centaurs are sacred, mobile, stealthy, high-Defence, and berserking. Their 55 gold and 29 recruitment points compete directly with other capital production. Bless value must be measured against the number the capital can actually deliver.

Pangaea research response tree

Branch A: immediate Enchantment tools

Enchantment 0 already provides all three Magical Tunes. Early Enchantment research can continue from a tool the roster can cast immediately, but the branch should be chosen for the enemy and the wider spell list rather than the national label alone.

Branch B: Monster Boar pressure

Conjuration 5 unlocks Monster Boar for every Pan and Pandemoniac. Ten Nature gems and a mage-turn buy a remote unrest threat, not a guaranteed province loss. Detection, response cost, unrest timing, and target value must be evaluated separately.

Branch C: Hamadryad access

Enchantment 5 unlocks Awaken Hamadryad. A Nature-primary Pan reaches N4, and the capital's five Nature gems can fund the ritual over time. The summoned commander's printed N3 and Harpy retinue may extend Nature operations, but the live result remains bounded by the unresolved summon details.

Branch D: strategic fort creation

Alteration 5 unlocks Fort of the Ancients for N4 casters. The spell can convert thirty-five Nature gems and a mage-turn into a complete fortress in printed legal terrain. Its value depends on fort type, location, timing, treasury, and opportunity cost rather than research level alone.

Branch E: Construction and generic path conversion

Construction converts common Earth and Nature access into equipment and can use rarer Water, Glamour, or Blood recruits when labelled. Because Pangaea has no national item restriction or rebate in the pinned snapshot, every item plan should use ordinary requirements and current cost rules.

Pangaea battlefield packages

Satyr line with Nature support

Cheap Satyrs hold space while a labelled Dryad, Pan, or Hierophant provides legal support. Protected Hoplites can anchor selected points. Morale, arrows, armour, fatigue, and the exact Tune interaction determine whether the package works.

Centaur mobile force

Warriors or Cataphracts create the contact line while Centaurs and Centaurides add missiles. A mundane Centaur Commander carries leadership where possible. Terrain speed, formation width, missile exposure, and anti-large counters must be checked before committing.

Minotaur breakthrough group

Minotaurs concentrate trample and berserk attacks on a chosen section. Satyrs or Centaurs can cover space around them. The package fails when targets, fatigue, morale, friendly congestion, or anti-large damage make trample inefficient.

Sacred White Centaur group

White Centaurs combine speed, Defence, stealth, berserk, sacred status, and several attacks. The full package includes capital recruitment, bless value, priest support, replacement time, and a plan for counters. Sacred status does not prove expansion or battlefield results.

Stealth pressure group

Satyr Sneaks, Revelers, Centaur Warriors, White Centaurs, and stealth commanders can assemble pressure away from the visible line. Legal stealth is source-backed; detection, coordination, movement resolution, patrol interaction, and combat success remain runtime questions.

Pangaea information and pressure network

Black Harpies supply cheap flying stealth scouts from forts and forests. Many national units can move stealthily, allowing force concentration to remain partially concealed. This strengthens report gathering and threat projection only when orders, detection risk, leadership, and fallback routes are managed.

Monster Boar adds remote economic pressure, while forest recruitment broadens local recovery after losses. Neither mechanic reveals enemy orders. A safe information plan still layers scouts, province reports, army estimates, protected laboratories, and a reserve.

Pangaea Pretender families

Family	What it can solve	What it must not conceal
Fire, Air, Astral, or Death bridge	Adds paths missing from repeatable recruitment and widens searching or counters	A path on the Pretender does not create researchers, gems, or safe availability.
Blood acceleration	Reduces dependence on the capital Pandemoniac queue	Hunters, slaves, laboratories, unrest control, and opportunity cost still matter.
Economy and infrastructure	Funds Pans, forts, laboratories, temples, and protected troops	Gold does not create local resources, recruitment points, or mage-turns.
White Centaur bless	Improves the capital sacred line	Capital throughput and 29 recruitment points per unit limit mass.
Awake expansion body	Reduces pressure on lightly protected early troops	Performance depends on map, scales, chassis, bless, scripting, and opponents.

No exact design is endorsed without game settings, map, opponents, legal chassis, and versioned evidence.

Pangaea matchup and failure matrix

Enemy problem	First answer to examine	Avoid
Massed light units	Satyr numbers, missiles, Minotaur trample, reachable area effects, and battlefield control	Sending expensive Centaurs into poor frontage without support.
Heavy armour	Minotaur strength, buffs, fatigue plans, Earth/Nature magic, and suitable weapons or summons	Assuming javelins and hooves solve protection unaided.
Accurate missiles	Protection, screens, speed, stealth approach, and target disruption	Exposing light Centaurs and Satyrs in open exchanges.
High-Defence elites	Multiple attacks, buffs, morale pressure, fatigue, and magic that avoids Defence	Relying on low-Attack Minotaurs alone.
Large or trample-resistant targets	Protected lines, missiles, Centaur attacks, magic, and other counters	Treating trample as universal damage.
Fast flankers or flyers	Guards, layered formations, reserves, and mage spacing	Leaving expensive Pans exposed behind a thin line.
Mindless or mind-immune forces	Physical damage, suitable magic, and non-morale plans	Building the script around Tune of Fear.
Raiding and patrol pressure	Cheap scouts, forest recruits, mobile reserves, forts, and route discipline	Assuming stealth makes an army undetectable.

Monthly Pangaea audit

- Is each fort or forest node limited by gold, resources, recruitment points, or commander turns?
- Are the two same-name Satyr variants recorded separately in recruitment plans?
- Is the capital queue producing a deliberate Pandemoniac or White Centaur rather than an automatic default?

- Is every random mage labelled by final paths?
- Are mundane commanders handling jobs that do not require magic or priesthood?
- Are recuperation and stealth claims still limited to the evidence available?
- Are Nature gems reserved against all three rituals, searching, forging, and emergencies?
- Does every ritual have research, a legal caster, the correct gems, a laboratory, a legal target, and a free mage-turn?
- Are heroes and rare Pan or Pandemoniac outcomes excluded from schedules that must be repeatable?
- Are morale, armour, movement, fatigue, supply, patrols, and replacement routes checked before battle?

Pangaea unresolved evidence boundary

The following remain open:

- 1 exact Recuperation eligibility, chance, timing, affliction coverage, and interaction rules;
- 2 live 6.36 random-path display and ordering for all five mage families;
- 3 forest-recruitment interface grouping, terrain edge cases, and queue presentation;
- 4 Magical Tune targeting, pulse timing, resistance, friendly inclusion, immunity, interruption, and underwater implementation;
- 5 expansion-party sizes, formations, scripts, stealth routes, and casualty ranges;
- 6 stealth movement, detection, patrol, seduction, and survival outcomes;
- 7 Minotaur trample, berserk, fatigue, congestion, and target-selection outcomes;
- 8 Awaken Hamadryad retinue roll, shapes, persistence, command, and complete live abilities;
- 9 Monster Boar detection, unrest timing, resolution order, and target response;
- 10 Fort of the Ancients terrain legality, fort type, hosting order, ownership, and shallow-sea edge cases;
- 11 hero arrival timing, late-hero semantics, and live special behaviour;
- 12 specific Pretender designs, blessings, matchups, and map performance;
- 13 R-047, R-058, and all other parked engine-dependent investigations.

These are evidence gaps, not invitations to guess. Runtime testing and preparation of new test assets remain paused.

Dossier source register

Official

- Dominions 6 Manual, revision 2: MA Pangaea nation pages, Magical Tunes, national rituals, forging, and fort construction.
- Illwinter official patch history through 6.36. No Pangaea, Pandemoniac, Hamadryad, Monster Boar, Fort of the Ancients, or national Tune correction is inferred from a negative ledger search.

Structured snapshot

- Dominions 6 Data Inspector, commit `cfac4311bc0b58053b8dead7bffb036ba9bd5dc`, pinned to the 6.35 data update; used for nation identity, fort and forest recruitment, random masks, capital sites, spell restrictions, item-field boundaries, and hero records.

Interpretation boundary

Roster entries, printed costs, paths, site income, spell and ritual requirements, and pinned metadata are source facts. Openings, recruitment packages, research branches, force packages, Pretender families, and matchup responses are strategy. Recuperation timing, forest-interface behaviour, stealth and patrol results, Tune resolution, ritual implementation, hero timing, and combat outcomes remain unresolved.
